

# BOISE SAWTEK™

## FOR DEALERS

### HOW BOISE SAWTEK™ HELPS DEALERS SAVE TIME AND MONEY:

Boise Cascade began introducing SawTek™ automated cutting systems to its dealers in 2003 to help them achieve faster, safer, more accurate processing of Boise Engineered Wood Products. The saws are used in conjunction with a package of other Boise EWP value-added services that are all components of Boise's SIMPLE FRAMING SYSTEM®, designed to help dealers and builders improve their profitability and reduce cycle time required to build homes.

### FASTER PROCESSING MEANS GREATER PRODUCTIVITY:

Boise SawTek automated cutting systems are fast and accurate, enabling dealers to cut and process Boise Engineered Wood Products faster, safer, and more accurately than ever before. SawTek systems can typically cut up to 30,000 lineal feet in an 8-hour shift and automatically cut utility holes for HVAC, plumbing or electric lines with accuracy to an incredible  $\frac{1}{16}$ ".

### LESS CHANCE OF WRONG CUTS OR MISSING PIECES:

Because SawTek cuts precisely what BC FRAMER® tells it to, there's less chance of incorrect cuts or pieces missing at the jobsite. Once the builder confirms the order with the designer, the information is seamlessly transferred through the system, ensuring correct deliveries.

## IMPROVED MATERIAL USE AND MINIMAL WASTE:

SawTek™ order optimization lets you intermix cut lists of several jobs and cut them together to get the most from each length, with as little as ½" of waste in a 66' length. Besides reducing material cost, optimization simplifies inventory control, as long lengths mean greatest cutting flexibility.

## LOWER INVESTMENT, HIGHER TURNS AND IMPROVED R.O.I:

SawTek's cutting speed and efficiency means more profit per manhour. It also means you can stock a little less inventory and increase inventory turns, which translates to increased profit.

## UNIQUE ABILITY TO PRE-CUT UTILITY HOLES AND INKJET MARK ALL PIECES:

SawTek can pre-cut utility holes for arrow-straight lines that install faster and cut build times. SawTek inkjet printers mark each cut piece for delivery to the jobsite, referenced to the color-coded framing placement plan for correct installation.

## ENHANCED SERVICE OFFERING FOR HOMEBUILDERS:

If you're looking for differentiation, SawTek can increase your odds of supplying all of each builder's materials. Offering a wide variety of options gives you more opportunities for sales and profit. And faster deliveries mean more satisfied builder accounts.
