

Boise Cascade Engineered Wood Products

manufactures a variety of products for structural framing. These engineered wood products offer a better system for framing floors and roofs by featuring beams, joists, and rim boards that work together as a system to provide a strong, reliable, and cost effective residential framing solution. Our continually expanding line of BCI® Joists and VERSA-LAM® laminated veneer lumber (LVL) products, ALLJOIST® solid-sawn lumber flange I-joists, and BOISE GLULAM® laminated beams, provides several benefits:

Time and Money Savings —

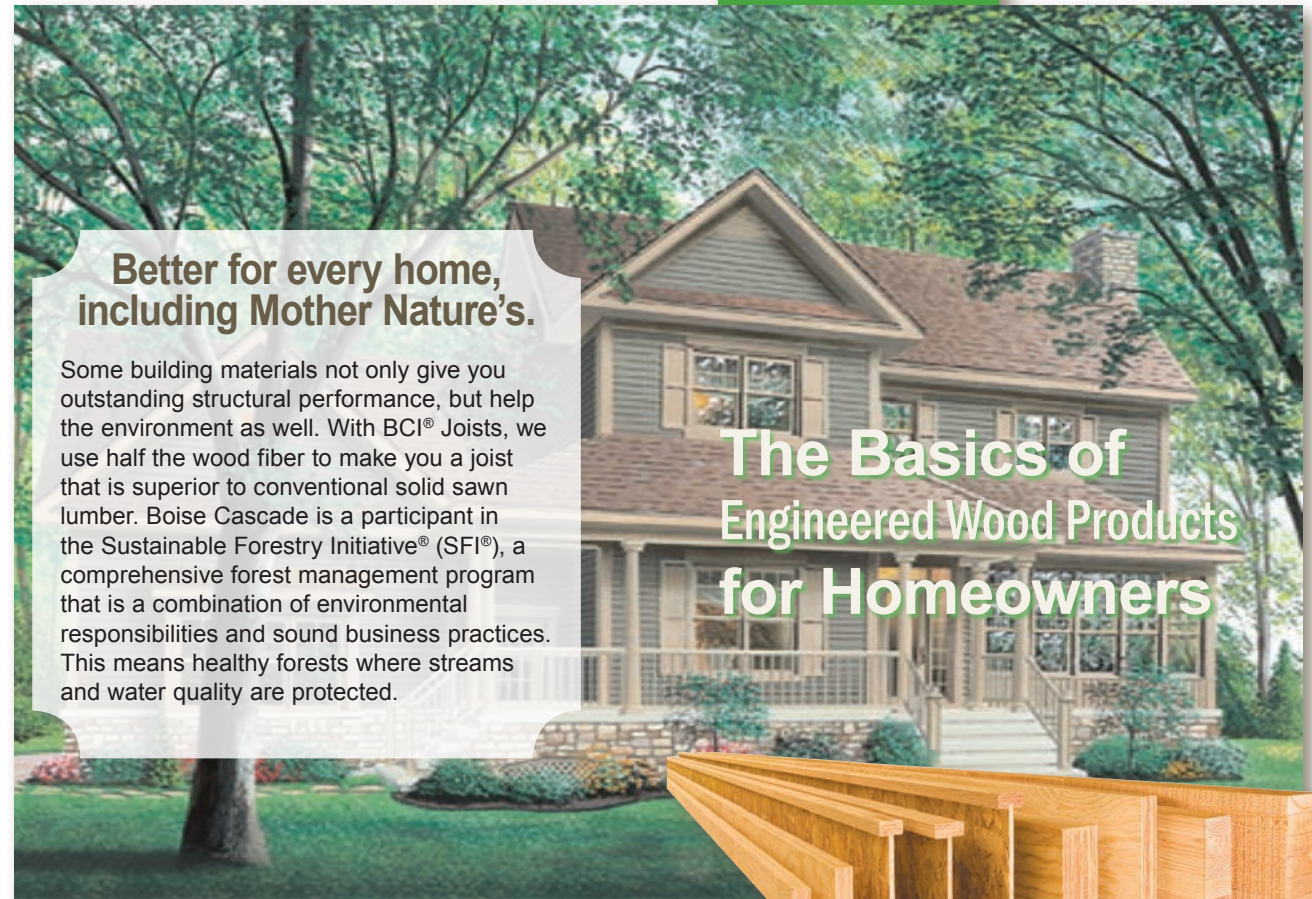

Our engineered wood products are manufactured to provide easier handling, quicker construction, and lower labor costs. *The results?* Increased strength at a better price.

Environmentally Friendly —

Engineered wood products are manufactured from about one-half the wood fiber used in dimension lumber, resulting in superior products that use available resources better.

Quality Guarantee —

The Boise Cascade logo is your sign that a home has been built with Boise Cascade Engineered Wood Products. Products that are backed by a lifetime guarantee of quality and performance.

Better for every home, including Mother Nature's.

Some building materials not only give you outstanding structural performance, but help the environment as well. With BCI® Joists, we use half the wood fiber to make you a joist that is superior to conventional solid sawn lumber. Boise Cascade is a participant in the Sustainable Forestry Initiative® (SFI®), a comprehensive forest management program that is a combination of environmental responsibilities and sound business practices. This means healthy forests where streams and water quality are protected.

What You Need to Know

The Boise Cascade Engineered Wood Products line should be as attractive to you as it is to your customers. *Why?* Because it is a straight forward, easily understood line with many outstanding features that smart builders and their clients appreciate.

Customer Awareness

Engineers, architects, designers and builders nationwide use engineered wood products because consistency is essential to professionalism.

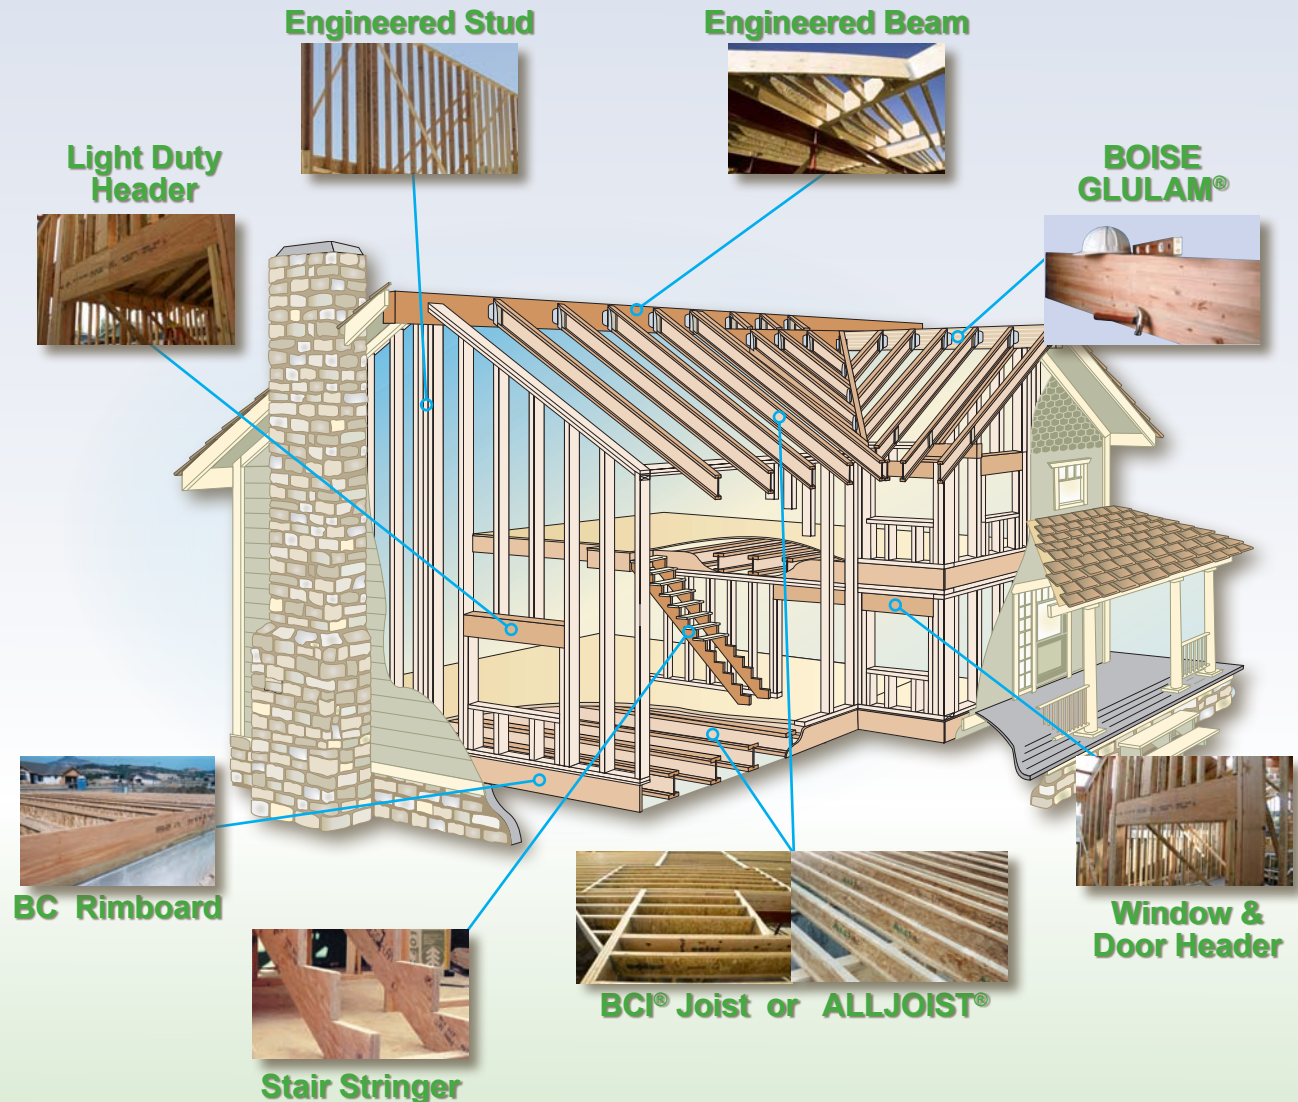

More importantly, home buyers are "educated" and knowledgeable about new, high tech products (EWP, Trex, Siding, etc.) Boise Cascade EWP manufactures better, long lasting, low maintenance products.

Boise Cascade Engineered Wood Products

Features and Benefits

Consistent, Stable Dimension	Straighter walls, flatter floors, fewer squeaks
Little Waste	Saves material costs, less labor
Light Weight	Easier to handle; quick construction; lower labor costs
Clean Appearance	Pleases the structure's owner which makes you look good
Stronger than Dimensional Lumber	Fewer posts, bigger, wider rooms, more open space
Completely Engineered System	Cleaner, simpler, more efficient mechanical designs
Predictable, Stable Material Pricing	Allows accurate material use planning, budgets and reduces interim financing
Lifetime Warranty	Guaranteed structure and performance instills confidence in the product, the builder and YOU!
Environmentally Friendly (Green Product)	Uses half the wood fiber of dimensional lumber (build "green" into the product)

Quality – Our first priority
